# Sophin UV/LED Gel application steps

**1** Clean nails then trim nail surface as normal manicure.

Gently buff all surface shine from the natural nails with a fine file or buffer.

**2** Remove the dust and wipe the nail using a clean lint free wipe.

Use an alcohol based **Nail Prep** to remove any surface oils or debris from the nail plate. Be mindful to clean near the cuticle and under the free edge. Allow to dry. Apply **Nail Prep** to the natural nail only!

**3** Apply **Ultrabond Primer** for more adhesion (more adhesion will prolong the soaking time) Allow to dry for 20 sec. A slight sticky layer will remain.

**4** Apply a thin layer of your desired **UV/LED Gel Base**. Make sure the free edge is sealed well.

Cure for 30-40 sec under LED lamp or 2 min under UV lamp.

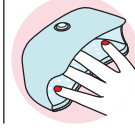

**5** Apply your desired **Gel Polish Color**, make sure the free edge is sealed well.

Cure again as described above. Repeat for the second coat.

**6** Apply your choice of **UV/LED Gel Top**.

Cure again as described above.

**7** Remove the tacky layer after curing with clean wipe moistened with **Nail Cleanser**.

**8** Apply cuticle oil to the skin surrounding the nail.

# Sophin UV/LED Gel removal steps

**1** Use a buffer or file to remove a gel layer from the nail surface. Do it very carefully so as not to damage the natural nail.

**2** Dip your nails for 5 minutes in warm water.

**3** Soak the cotton pad with **Remover with Lanolin** and put on the nails. Tightly wrap your nails with the foil.

**4** Wait 5 minutes.

**5** Remove the foil and cotton pad. Using an wood stick, gently remove the gel from the surface of the nail, starting from the cuticle to the free edge. Be careful not to damage the natural nail.

**6** Repeat soaking until gel is removed.

**7** Finish with special nail oil.
